KEY METAGAME TAKEAWAYS FROM 7 REGIONALS

- **Rillaboom & Sneasler Duopoly:** Rillaboom (50.37%) and Sneasler (38.85%) dictate turn 1 positioning. Fake Out + Unburden Dire Claw/Close Combat forces every team to respect priority and terrain control.
- **Incineroar Everywhere (34.10%):** Intimidate + Parting Shot creates immense cycle pressure, making Competitive Milotic and Defiant Kingambit prime anti-meta weapons.
- **Mega Raichu Y Supremacy (25.80%):** Overcoming Salamence-Mega (21.13%) and Charizard-Mega-Y (16.96%), Mega Raichu Y's 200 Base Speed and 180 SpA render it the fastest offensive pivot in the format.

Coach Porygon Official Verdict

⚠️ TGT-01 / GREED: Zap Cannon Variance

While Zap Cannon guarantees an OHKO on Charizard-Mega-Y and 100% paralysis, its **50% unboosted accuracy** poses severe variance risks in high-stakes Swiss matches. If Milotic has not established Coil accuracy boosts, consider **Thunderbolt** or **Volt Switch** for tournament consistency.

🛑 TGT-02: Normal/Psychic Ghost Immunity

Both Farigiraf (14.72% usage) and Indeedee-F (14.82% usage) are **Normal/Psychic dual types**. They possess complete immunity to Shadow Ball from Gholdengo and Shadow Sneak from Ceruledge. Always default to **Make It Rain** or **Bitter Blade** into these slots.

🛡️ POS-02: Lead Compression Mastery

Open **Rillaboom + Ceruledge** into Rain/Earthquake cores (instant Grassy Seed + 50% Ground reduction), or **Staraptor + Milotic** into Incineroar + Sneasler leads (punishing Intimidate with Competitive +2 while intimidating Sneasler).

4-Step Pre-Turn Validation Checklist:

1. Confirm Weather/Terrain • 2. Calculate Post-Mega Speeds • 3. Check Ghost/Terrain Immunities • 4. Verify Positive VP Trade
